### **Connecting Research with Ethics**

## **Ol** HBRA: Human Limits of Performance/Endurance

The meaning of 'Human Biomedical Research' in HBRA includes any research intended to study "the performance or endurance of human individuals". This clause relates to the testing of Human Limits of performance and endurance (including mental, physiological, and physical functions) - e.g., research activity that deviates from an average

person's everyday routine.

On 8 March, the NTU-IRB held a workshop on topics such as: What is 'Human Subjects Research'; the differences between 'Exempt, Expedited, Full Board'; and the IRB's Review Process.

Our attendees also received valuable insights on common issues that can delay IRB reviews, and how to obtain faster IRB approvals.

For those who couldn't make it, fret not! We've got you covered - the session recording & slides are now available to view at your convenience.

Click here for session recording and slides. (Under 'Recent Events')
